Offerings & History

Since 1978 Thomas Group has helped hundreds of businesses, Federal Government, and military enterprises realize billions in cash improvements. Born of the challenges of the emerging semiconductor industry, Thomas Group's First Pass Yield (quality) and Total Cycle Time® (speed) process management concepts helped shape the semiconductor manufacturing processes that have since made electronic products the ubiquitous and essential part of our lives they are today.

As best practices evolved in the manufacturing environment, Thomas Group, began applying them cross functionally throughout the business enterprise and across a broad spectrum of industries such as aerospace, automotive, consumer and retail products, distribution, Federal Government, healthcare and life sciences, manufacturing, technology and telecommunications, and transportation and logistics—always seeking to help businesses improve throughput and bottom-line profitability with an enterprise-wide, continuous process improvement collaborative approach.

Today, Thomas Group continues to evolve its tool set and develop more innovative solutions to drive even higher bottom line results. We are helping businesses every day link their strategic objectives across all functions of the enterprise. Since its inception, Thomas Group has helped hundreds of clients implement more than 550 programs to realize billions in hard cash improvements.
